

Blind Validation Study 03 — Adversarial Research Report

This synthetic report intentionally contains mixed encodings, missing values, subgroup/timepoint claims, multivariable regression, and a broad scope statement.

1. Subgroup and timepoint claim

At week 12, the Treatment group among Female participants had a mean change score of 7.1%.

2. Multivariable model

Multiple linear regression showed change score was associated with age and baseline score; the reported age coefficient was 0.26.

3. Broad claim

The treatment was effective in all subgroups and at all timepoints.

4. Results table

Measure	Reported
Female Treatment week 12 mean	7.1%
Age coefficient	0.26

5. Data notes

Sex is encoded as F/Female/M/Male. Group contains Treatment and control. Week is numeric. Some change_score values are missing. The regression is intended to use complete cases.
